

LADDER RUNG COVERS

ANTI-SLIP SOLUTIONS

DESCRIPTION

Vigil Antislip Ladder Rung Covers eliminate the risk of slips from ladders by increasing the surface area for foot contact and greatly increasing the friction coefficient and visibility. Ladder rung covers are manufactured to light industrial grade.

- colorbond steel, stainless steel, or aluminum foundation
- easy installation
- color options
- effective non-slip solution
- long lasting

Severe weather, spillages and even immersion in viscous or corrosive fluids won't affect the performance of the Ladder Rung Cover or its life span

Options include foundation, colors, photoluminescent, shapes deck mark and sizes.

SPECIFICATIONS

Application	For industrial, offshore, and commercial foot traffic areas.
Installation	Options include saddle assembly, TEK / concrete / timber screws and/or adhesives.
Dimensions	Multiple options
Nosing Profile/Return	L-shape for grating or bull nose for curved checker plate steps. Return dimension is 20mm (0.8"), radius 8mm (0.3")
Colors	Safety yellow is recommended, range of other available colors.
Grades	Light Industrial – This grade offers excellent anti slip properties without being too severe to damage personnel's hands.
Foundations	Class 1: Steel foundation – 1.2mm colorbond steel / 1.2mm stainless steel / 2.0mm or 4.0mm aluminum Class 2: Steel foundation – 1.2mm colorbond steel Class 3: Steel foundation – 1.2mm galvanized steel
Steel / Resin Interface	Floating fabric membrane (class1). Epoxy primer (class 2 and 3)
Aggregate	Silicon Carbide (class 1). Fused alumina (class 2 and 3)
Aggregate Sizes	Depending on application and environment mesh sizes/matrixes range from 12-46.
Resistance	Impervious to any fluid spillage and weather conditions.

INSTALLATIONS

LADDER RUNG OPTIONS
